Introduction

MKS Little Daily Surprises is an Android app that enables you to prepare a series of surprise messages for your loved ones, friends and anyone else in your contact list.

The app is freely available on Google Play Store and must be used to create and receive surprises.

Workflow

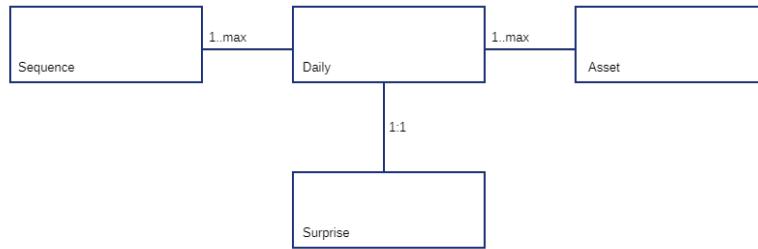

When you open the app on your device and have logged in, you are directed to the Surprise page where you will see all currently active Surprises sent to you from others. Depending on your device settings, a message will pop-up to indicate reception of a new surprise in your message area and on the app icon itself. The frequency this is checked is dependent on your device manufacturer's implementation but the app requests a 15 minute interval for surprise updates.

To create your own surprises for your contacts, you can switch to the Sequences page where you can create new Sequences, edit existing Sequences and delete any inactive Sequences you already have.

Each Sequence determines the start date and duration of the surprises you want to create. Each Surprise shows up in the app of your contact from the starting date for 24 hours.

The limits on the maximum number of Sequences, Dailies, Assets and Contact assignments you can have are shown on the appropriate pages. Deleting old entries frees up the appropriate budget for new creations.

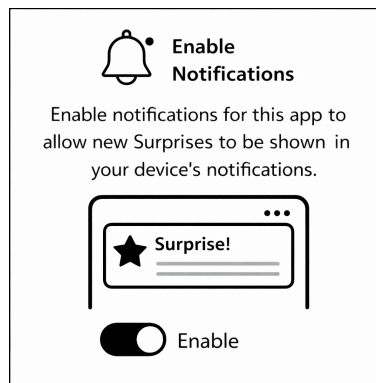

Sequences which have reached their starting date and time can't be edited further though future Dailies within an active Sequence can be modified by you as long as the activation time remains in the future. Deleting (in-)active Sequences removes the access for all assigned contacts too.

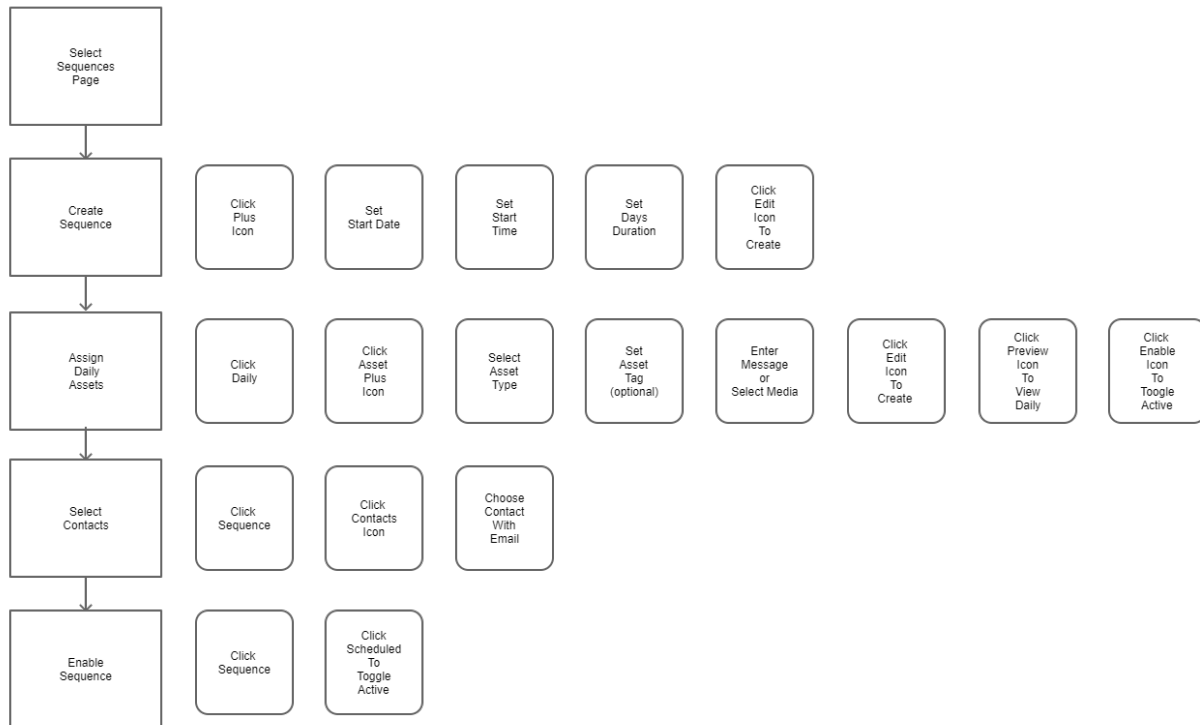

Depending on your network connection, downloading surprises or generating a daily preview may take a few moments if the assets are large and heavy. An Asset is limited in maximum size and this is indicated at the appropriate asset creation and selection.

Notifications

To get notifications, these need to be enabled for the app in the standard device configuration settings for the app.

Getting Started

- Create a new Sequence choosing the days duration. Choose a start date in the future and the default time for each Daily.
- For each Daily, assign appropriate Assets by creating them and entering the data or media selection. Daily time can be edited independent of the Sequence time but remains on the set date. The Daily is shown your recipient each day for 24 hours.
- Choose the contacts (and yourself too if you are in your own contacts) to receive the daily surprises.
- Enable the Sequence to make it live for your contacts when the time comes. Individual Dailies within a Sequence can be disabled to skip messaging on those days.
- Elements such as Sequences, Assets and Contacts can be swiped left to be deleted. Deletions of Sequences and Assets can't be undone but Contacts are only removed from the Sequence assignment when swiped.
- Back navigation between pages can be initiated by the active navigation method set on the device, swiping right or using the hardware/software back button in the navigation bar. Navigating back will return to the prior active page.

- Some element creation actions such as creating a new sequence or asset automatically return to the previous page.

Glossary

Surprise

A Surprise is a daily message your have received from a contact containing a single or series of data consisting of a text message, a URL link, an image or an audio file.

Sequence

A Sequence determines the starting date and duration in days for a series of Surprises you want to generate for a number of contacts from your device.

Daily

A Daily is the working state of a Surprise which is edited to contain a series of text messages, URL links, images or audio files you want to compose as a surprise for a contact.

Asset

An Asset is an individual element of a Surprise consisting of a series of text messages, URL links, images or audio files. Each array of Assets make up a Daily during creation which, when enabled, shows up as a Surprise in the app on your assigned Contacts devices.

Contact

A Contact is an entry in your Contact list from your device running the app. The Contact must contain an Email address used with a Google Play Store so that the recipient can receive your Surprise by installing and logging in to the app using that account.

Support
